SEQUENCE WINDOW

01 — WHAT WE SELL

Newronium Data & AI — Service Lines

Three services, one mission: **"Data that moves the business."** Every outreach message must anchor to the buyer's pain — not the service name.

THE CORE PROBLEM WE SOLVE (USE THIS LANGUAGE VERBATIM IN OUTREACH)

"Most companies generate large volumes of data, but meetings still revolve around *'What is the right data?'* instead of *'What is the right action?'*. Data in silos, dashboards that nobody uses and slow decisions that cost the market."

01. Data Stack & Architecture

Scalable cloud infrastructure, ready for growth. For companies whose data lives in disconnected systems and nobody trusts the numbers in the room.

CTO

Head of Data

CIO

Pain hook: "Your teams are arguing about numbers instead of making decisions."

02. Data Engineering

Pipelines that deliver clean data, at the right time. For ops and data teams spending most of their week fixing broken pipelines instead of generating insights.

Head of Data

Data Engineer

COO

Pain hook: "Your data team is a maintenance crew, not a growth engine."

03. Analytics + Applied AI

Models to predict, identify patterns and automate decisions. Turns reactive reporting into anticipation — know what will happen before the market forces your hand.

CEO

CDO

VP Analytics

Pain hook: "You're reacting to the market instead of anticipating it."

**Less
Uncertainty**

Decisions based on facts, not guesswork

Less Waste

Automatic reports, real-time analysis

**More
Predictability**

Anticipate scenarios
before the market
dictates them

More Speed

React to change when
there is still room for
action

02 — WHO WE TARGET

Ideal Customer Profile (ICP)

Newronium's own page says it best: *"It makes sense if you lead a company at scale with fragmented data, need a single source of truth, or want to modernize infra for AI."* Build every Apollo filter around this sentence.

COMPANY FIRMOGRAPHICS

- Revenue: €10M – €300M
 - (companies "at scale" with real data volume)
- Employees: 100 – 2,000
- Funding: Series B-D, or profitable scaleup / SME
- Multiple departments generating data (ops, finance, marketing, product)
- Recently hired a Data / Analytics / AI role (intent signal)
- Posted Data Engineer, BI Analyst, or ML Engineer jobs in last 90 days

PRIORITY INDUSTRIES

- Financial Services & Fintech (high data volume, regulatory pressure)
- Retail & E-commerce (demand forecasting, churn, inventory)
- Health & MedTech (reporting, compliance, patient data)
- Logistics & Supply Chain (real-time ops data)
- SaaS / B2B Tech (product analytics, revenue intelligence)
- Manufacturing (Industry 4.0 / predictive maintenance)

→ Insurance (risk modelling, claims automation)

DECISION MAKERS (PRIMARY BUYERS)

- CEO / Co-founder (when data = strategic bottleneck)
- Chief Data Officer (CDO) — owns the mandate
- Chief Technology Officer (CTO) — owns the infrastructure
- VP / Head of Data & Analytics
- Chief Digital / Transformation Officer
- COO (when "slow decisions" is the pain framing)

CHAMPIONS & INFLUENCERS

- Data Engineers (frustrated by broken pipelines)
- BI Analysts (whose dashboards nobody uses)
- Product Managers owning data products
- CFO (ROI framing: "Less time wasted, more predictability")
- IT Director overseeing cloud migration

INTENT / TRIGGER SIGNALS (APOLLO + CLAY FILTERS)

- Job postings: Data Engineer, Analytics Engineer, BI Lead (90 days)
- Recent funding round — budget just unlocked
- New CDO / CTO / CIO hire — they want to make an impact fast
- Company mentioned "data strategy" or "AI" in press / LinkedIn
- Tech stack includes legacy BI (Tableau without modern warehouse)

DISQUALIFIERS (SKIP IN APOLLO)

- Already has a mature, in-house data team (5+ data engineers)
- Pre-revenue startup — no budget, wrong stage
- Public sector — long cycles, procurement friction
- Pure professional services (consultancies, law firms) — not data-driven by nature
- Engaged a direct data consultancy competitor in last 12 months

→ Company has 3+ different data tools with no central warehouse

03 — THE STACK

GTM Tool Stack & Roles

Each tool has one primary job. No overlap, no wasted spend. Start with Tier 1 — add Tier 2 as volume scales.

TIER 1 — CORE STACK (START HERE)

Apollo.io

PROSPECTING + EMAIL SEQUENCES

Build ICP-filtered contact lists (title, industry, headcount, tech stack). Run email + call sequences with branching logic. Built-in CRM sync. **Start here for all prospecting.**

Clay

ENRICHMENT + PERSONALIZATION ENGINE

Pull Apollo contacts → waterfall-enrich (email, phone, LinkedIn, job postings, tech stack, news mentions) → generate hyper-personalized snippets using AI. Feeds back into Apollo sequences.

LinkedIn Sales Navigator

ACCOUNT INTELLIGENCE + SOCIAL SELLING

Track decision maker activity, get job change alerts, map buying committees, send InMail to non-connection leads. Feed found profiles into Clay for enrichment.

Instantly.ai

COLD EMAIL INFRASTRUCTURE

Unlimited sending mailboxes with auto-warmup and inbox rotation. Run high-volume cold email campaigns without harming domain reputation. Connects with Clay output.

TIER 2 — AMPLIFIERS (ADD AT SCALE)

HeyReach

LINKEDIN OUTREACH AUTOMATION

Multi-account LinkedIn sequences: connect requests, message drips, profile views, follow-ups. Runs parallel to email for multichannel coverage.

Loom

PRE-MEETING PERSONALIZED VIDEO

Record a 60-90s personalized video per prospect referencing their specific stack/problem. Attach in emails. Proven +30% reply rate uplift in B2B consulting sales.

Calendly

MEETING SCHEDULING + REMINDERS

Auto-send confirmation, 24h reminder, and 1h reminder emails + SMS. Add a pre-meeting asset in confirmation email to prime the prospect before the call.

Crunchbase / Dealroom

FUNDING & TRIGGER INTELLIGENCE

Monitor funding rounds and leadership hires in target sectors. Funding events = budget unlocked = perfect outreach window. Feed into Clay enrichment.

Bombora / G2 Intent

INTENT DATA (BUYER SIGNALS)

Identify companies actively researching "data engineering," "ML consulting," or "AI strategy" right now. Prioritize these in Apollo sequences — 3x higher conversion rate.

Notion CRM / Airtable

PIPELINE TRACKING & REPORTING

Track all leads: stage (contacted → replied → meeting booked → showed → qualified → proposal). Report show rate, reply rate, and conversion weekly.

This is the repeatable machine. Run it weekly. Each loop should produce 30-50 qualified leads entering the sequence.

1

Build the Target List (Apollo + Sales Nav)

In Apollo: filter by industry, headcount (50-1000), seniority (Director+), tech stack (Snowflake, Databricks, dbt = data-mature), location. Pull 200-300 contacts per week. In Sales Navigator: filter for "recently changed jobs" in CDO/CTO/Head of Data roles — these buyers want to make an impact quickly.

Apollo.io

LinkedIn Sales Nav

Crunchbase

2

Enrich & Score in Clay

Import Apollo list into Clay. Run waterfall enrichment: verify email, pull LinkedIn URL, scrape recent posts, check company job postings (data roles = intent), pull tech stack via BuiltWith, check recent funding. Clay AI scores each lead 1-10 on ICP fit. Only send leads scored 7+ to outreach.

Clay

BuiltWith

Hunter.io

OpenAI via Clay

3

Generate Personalized Snippets (Clay AI)

For each lead, Clay generates a 1-2 sentence personalized hook: references their LinkedIn post, a recent company news item, a job posting, or a tech stack observation. This is injected into the email as a {{icebreaker}} variable. Never blast generic copy.

Clay + GPT-4o

4

Launch Multichannel Sequence

Enriched leads flow into Apollo sequences (email) and HeyReach (LinkedIn) simultaneously. 7-9 touches over 10 days across email + LinkedIn + (optional) phone. Email goes via Instantly for deliverability at scale. Each touch references the same core pain — not a new pitch.

Apollo.io

Instantly.ai

HeyReach

5

Qualify Replies & Book Meetings

Any positive reply gets a response within 2 hours (fast response = higher close rate). Send Calendly link with a specific slot suggestion ("Does Thursday 10am or Friday 2pm work?"). Include a one-page Data & AI service overview PDF in the booking confirmation.

[Calendly](#)
[Apollo](#)

6

Pre-Meeting Show Rate Protocol

At booking: Calendly confirmation with Newronium's service PDF ("Data that moves the business") + what to expect in the 30 min. T-48h: Loom video personalized to their company. T-24h: industry case study email — "ahead of tomorrow." T-4h: SMS/WhatsApp reminder with Zoom link. T-10min: manual message "We're on in 10 — looking forward." This sequence targets 80%+ show rate.

EMAIL #1 — PERSONALIZED HOOK (DAY 1) · ANCHOR: "MEETINGS ABOUT DATA VS. ACTION"

Subject: {{Company}} — data or decisions?

Hi {{FirstName}},

{{icebreaker_from_Clay}}

Quick question: are your team meetings still about "what is the right data" — or already about "what is the right action"?

Most {{industry}} companies at your scale have data everywhere but decisions still run on gut. Fragmented sources, dashboards nobody trusts, and by the time the report is ready — the window to act is gone.

At Newronium we turn data infrastructure into a competitive advantage: clean pipelines, a single source of truth, and applied AI that lets you anticipate the market instead of reacting to it.

Worth 30 minutes to see if it fits? No commitment — just a structured conversation.

[Your name]

Newronium | Data & AI — Intelligence with Consequence

EMAIL #2 — SOCIAL PROOF (DAY 4) · ANCHOR: "DASHBOARDS NOBODY USES"

Subject: The dashboard {{Company}}'s team will actually use

Hi {{FirstName}},

Sending this because I've seen this pattern a lot in {{industry}}:

The company invests in a BI tool. Reports get built. Six months later nobody opens them. Decisions still come from the CEO's spreadsheet.

We worked with a {{industry}} company in a similar position. Three months after we redesigned their data stack and analytics layer:

→ 80% of the leadership team was using dashboards weekly (up from ~5%)

- They reduced their monthly close from 12 days to 3
- They launched a churn prediction model that identified risk 45 days earlier than their old process

I can share the full case study if useful. Worth a 30-minute call?

[Your name]

Newronium

EMAIL #3 — PERSONALIZED LOOM VIDEO (DAY 7) · ANCHOR: "SLOW DECISIONS COST THE MARKET"

Subject: 90 seconds for {{FirstName}} at {{Company}}

Hi {{FirstName}},

I recorded a short video specifically for you and {{Company}} – [Loom link].

In it I cover:

- The pattern I see in {{industry}} companies at your stage
- One specific thing in {{Company}}'s current setup that I think is slowing decisions
- What a first engagement with Newronium looks like (and what it doesn't)

It's 90 seconds. If it's relevant, let's talk. If not, I'll stop here.

[Your name]

EMAIL #4 — BREAK-UP (DAY 10)

Subject: Closing the loop, {{FirstName}}

Hi {{FirstName}},

I've sent a few messages – I'll assume the timing isn't right and I'll stop here.

If fragmented data, slow decisions or modernizing for AI ever become a priority at {{Company}}, I'm one message away.

One last question: is there someone else at {{Company}} I should be speaking with about this?

Thanks for your time,
[Your name]
Newronium | newronium.com/en/services/data-ai

LINKEDIN CONNECTION NOTE (DAY 2)

Hi {{FirstName}} – noticed you're leading {{role}} at {{Company}}.
We work with {{industry}} companies that want data to drive decisions, not just
fill reports. Thought it was worth connecting. No pitch – just a relevant
space.

LINKEDIN DIRECT MESSAGE AFTER CONNECTION (DAY 5)

Thanks for connecting, {{FirstName}}.

I work with companies like {{Company}} that are scaling and hitting the
moment
where data becomes either an advantage or a bottleneck.

At Newronium we focus on the infrastructure, pipelines and AI layer that
makes
the difference – not vanity dashboards.

Would a 30-min conversation make sense? No commitment, structured and
direct.

06 — THE 80% SHOW RATE

Meeting Attendance Optimization

The industry average show rate is 55–65%. Getting to 80%+ requires a deliberate pre-meeting protocol, not just calendar reminders.

The 6-Touch Pre-Meeting Protocol

T-0

Booking Confirmation

Calendly auto-sends. Include a 1-page "What to expect" PDF + a relevant case study PDF. Prime their expectations immediately.

T-48h

Personalized Loom Video

Record a 90-second video referencing their company, their role, and the specific problem you'll discuss. Send via email. "Here's what I'll cover Thursday."

T-24h

Industry Case Study

Send via email: "Ahead of tomorrow — here's how we solved [their pain] for [company in their sector]. This gives us a starting point."

T-4h

SMS / WhatsApp Reminder

"Looking forward to our call today at [time]. Here's the Zoom link: [link]. Reply RESCHEDULE if the time no longer works." Reduces ghost rate by 20-30%.

T-10min

Manual Ping

A short LinkedIn message or email: "We're on in 10 minutes — here's the meeting link. See you there." Personal touch that signals you're prepared and present.

No Show

No-Show Recovery

Wait 10 minutes, send: "Looks like something came up — no problem. Here are 3 slots for next week: [Calendly link]." Recover 40-60% of no-shows same week.

✓ What Drives Show Rate Up

- Pre-meeting value delivery (case study, Loom video) — +20-30%
- Specific time confirmation (not open slot) — +10%
- SMS/WhatsApp reminder 4h before — +20%

✗ What Kills Show Rate

- Only one automated Calendly reminder (default)
- Generic meeting title ("Discovery Call")
- No pre-meeting material — prospect forgets why they booked
- Booking more than 5 days in advance without re-confirming

- Manual personal ping 10 min before — +5-10%
- Reschedule option in every reminder (reduces ghost) — +10%
- Short meetings (20-25 min, not 60) — easier to commit to

- No-show ignored — they never get rescheduled
- Long gaps between booking and meeting date

07 — PERFORMANCE

KPIs & Weekly Targets

Track these weekly. If a metric drops below target, diagnose before increasing volume — more bad outreach is not the fix.

08 — THE RHYTHM

Weekly Operating Cadence

Discipline beats inspiration. This is what each week looks like when the machine is running.

Monday

- ✓ Pull 200 new contacts from Apollo (ICP filters)
- ✓ Import to Clay — run enrichment + scoring
- ✓ Review Clay output, manually approve top 80 leads
- ✓ Check replies from prior week sequences, respond within 2h

Tuesday

- ✓ Launch 80 new leads into Apollo email sequence

- ✓ Launch same leads into HeyReach LinkedIn sequence
- ✓ Research this week's booked meetings (company + person)
- ✓ Prepare personalized Loom videos for Thursday/Friday meetings

Wednesday

- ✓ Engage with prospects' LinkedIn posts (like, comment — warm touch)
- ✓ Send T-48h Loom video to all meetings booked for Friday
- ✓ Reply to all sequence replies (positive and negative)
- ✓ Check LinkedIn Sales Nav for new job-change alerts → add to next list

Thursday

- ✓ Conduct discovery meetings (hold 20-25 min, strict agenda)
- ✓ Send T-24h case study to Friday meetings
- ✓ Follow up with no-shows from this week with reschedule offer
- ✓ Update pipeline tracker (Notion/Airtable) with meeting outcomes

Friday

- ✓ Conduct remaining discovery meetings
- ✓ Send post-meeting follow-up within 2h (summary + next step)
- ✓ Weekly metrics review: reply rate, show rate, qualified meetings
- ✓ Identify what's working → double down next week

09 — THE MEETING

Discovery Call Framework (20-25 min)

The goal of the first meeting is NOT to pitch. It's to diagnose pain and earn the right to a second call with a proposal.

Newronium's CTA language: "A structured conversation to reduce noise, focus on the essentials and accelerate with control. 30 min. No commitment." — Use this framing when booking and in all reminders. It positions you as a peer, not a vendor.

0-3 min: Set the Agenda

"I have 30 minutes reserved. My goal is simple — understand where data is creating friction for you, share one or two relevant things we've done for similar companies, and we both decide if a next step makes sense. Structured and direct. Sound good?"

3-15 min: Diagnose the 3 Core Pains

- "When your leadership meets, are decisions based on data — or is there still a fight about which number is right?"
- "How much of your data team's time goes into maintaining pipelines vs. producing insights?"
- "Do you have dashboards that people actually use daily, or are they mostly ignored?"
- "When a business decision needs to be made — how long does it take to get reliable data to support it?"
- "Where are you today vs. where you want to be on data maturity in 12 months?"

15-22 min: Relevant Story

Share ONE case study that matches their exact pain. Be specific: company profile, what was broken, what Newronium delivered, the

22-27 min: Qualify (BANT + Fit)

- "Is this a priority in the next 1-2 quarters, or more of a 2026 initiative?"
- "Who else would be involved in evaluating this — CTO, CEO?"
- "Do you have a budget set aside for data infrastructure or AI, or is this still being built?"
- "Have you worked with external consultancies on data before? What worked and what didn't?"
- "What does a successful outcome look like for you personally in 6 months?"

27-30 min: Concrete Next Step

Always close with a specific action: *"I'll put together a tailored approach document by [date]. Can we book a 30-min follow-up for [specific day] to walk through it together?"* Never leave it open. Book the next meeting before hanging up.

Post-Meeting Follow-up (within 2h)

Send an email with: (1) 3-bullet summary of what you heard, (2) the specific Newronium service that matches, (3) a link to a relevant case study, (4) Calendly link for the

measurable business outcome.
Never use a generic slide deck.
Reference the outcome in their
language: "less uncertainty, more
speed."

proposal call. Fast follow-up =
credibility signal.
